SINGULARITY FORMATION FOR THE LANDAU-LIFSHITZ-GILBERT EQUATION IN DIMENSION TWO

PROF. YIFU ZHOU
Johns Hopkins University

Abstract

Landau-Lifshitz-Gilbert equation (LLG), which models the evolution of spin fields in continuum ferromagnetism, can be viewed as a coupling between the harmonic map heat flow and the Schrodinger map flow. In this talk, we shall report some recent gluing construction of finite-time singularities for LLG in dimension two. To overcome the difficulties caused by the dispersion, technical ingredients such as distorted Fourier transform and sub-Gaussian estimates are employed. This is based on a joint work with J. Wei and Q. Zhang.
