

EXERCISES FOR WEEK 3

Find the exact values of the edge-length, total surface area, volume, radius of insphere, and dihedral angle of neighboring faces of the regular icosahedron (20 faces) which is inscribed inside the unit sphere.

[Note]: You may look at the following page for an alternate method (answers using this approach will not be accepted):

<http://mathworld.wolfram.com/Icosahedron.html>

but pay attention that you need to scale the “ R ” (circumradius) there to be 1 for our answers.

Some numerical values: 1.05146, 9.57454, 2.53615, 0.794653, 2.41186
